Marketing objectives: market share

3.3 Marketing management

3.3.1 Setting marketing objectives; 3.3.3 segmentation, targeting, positioning

A revision lesson. Pupils run a car dealership in firms of four and revise marketing objectives: market share on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Segment revenue

Round 1

Revenue in one segment.

Dealer's revenue from this segment?

Town's car sales, a year	**£850,000**
First-time buyers, % of sales	**30%**
Dealer's share of them	**20%**

ANSWER

£51,000

30% × £850,000 = £255,000;
× 20% = £51,000

Why: The segment is worth £255,000. The dealer takes 20% of it.

2 High share benefits

Round 1

A higher market share is your main marketing objective.

Which two are benefits of a high share?

- **A** Higher profit is certain
- **B** Less need to control costs
- **C** The market grows faster
- **D** More buying power with suppliers
- **E** Buyers see you as the leader

ANSWER

✓ More buying power with suppliers
✓ Buyers see you as the leader

Why: A leader buys better and is trusted, but share does not guarantee profit.

3 Rank market growth

Round 2

Three markets, sales last year and this year.

Order by market growth, fastest first?

- **A** 20,000 to 21,000 cars
- **B** 8,000 to 8,800 cars
- **C** 2,000 to 2,300 cars

ANSWER

1. 2,000 to 2,300 cars
2. 8,000 to 8,800 cars
3. 20,000 to 21,000 cars

Why: Growth: 15%, 10%, 5%. The most extra cars is the slowest growth.

Topic tasks

4 Segment next year

Round 2

A growing segment.

Dealer's revenue from it next year?

Town's car sales, a year	**£500,000**
First-time buyers, % of sales	**20%**
Segment grows by	**5%**
Dealer's share of segment	**10%**

ANSWER

£10,500

20% × £500,000 = £100,000; + 5% = £105,000; × 10% = £10,500

Why: Find the segment, grow it, then take the dealer's share.

5 Did we do well?

Round 3

Your sales rose 10% this year. The market rose 20%.

Did your firm do well, and why?

A No

B Yes

ANSWER

✔ **No**

Why: Your share fell: rivals took more of the growth than you.

6 Cars to hit target

Round 3

Win a bigger share.

Extra cars needed next year to hit the target?

Town sales this year	**550 cars**
The market grows by	**20%**
Dealer's sales this year	**44 cars**
Target share next year	**10%**

ANSWER

£22

550 + 20% = 660; 10% × 660 = 66; 66 − 44 = 22

Why: The target is a share of next year's bigger market.

Final questions

Each pupil answers 6 final questions on marketing objectives: market share. They come from these 14 questions.

Then each pupil writes one short answer: “Evaluate targeting one segment instead of the whole market.”

1 A service-plan provider targets small delivery firms whose vans each travel more than 30,000 miles a year. Which bases of segmentation are being combined?
✔ **Business size and usage rate**

2 A dealership sold 420 of the 6,000 vans sold in its regional market. What was its unit market share?
✔ **7%**

3 Annual sales in a used-EV market rose from 48,000 to 60,000 units. What was the market growth rate?
✔ **25%**

4 Owners of cars over eight years old respond strongly to fixed-price repair bundles. Which targeting rule uses the evidence most directly?
✔ **Target owners of 8+ year-old cars**

5 A town has many small MOT centres, customers can compare prices easily and no centre controls supply. Which market feature is most evident?
✔ **A competitive market**

6 Registrations for used electric cars rise from 8,000 to 10,400 in a region. What is the percentage market growth?
✔ **30%**

7 Research finds commuters driving 40–70 miles a day with no home charging. Which proposition fits this segment best?
✔ **A hybrid offer with charging advice**

8 A price-comparison platform makes dealer prices easier to observe. What competitive effect is most plausible?
✔ **Price pressure on similar dealers**

9 A regional dealer sells 1,350 vehicles in a market of 18,000. What is its unit market share?
✔ **7.5%**

10 The Sales lead has separate evidence for one-van sole traders and 200-plus vehicle national fleets. Why question one identical proposal?
✔ **Their needs and buying power differ**

Final questions

11 Regional used EV registrations rise from 1,800 to 2,340 a year. What is the market growth rate?

✔ **30%**

12 A dealer has identified family, taxi and delivery segments. It now advertises only to delivery firms. What has it done?

✔ **Targeted one segment of the market**

13 5,600 vans are sold in a region in a year, and one dealer group sells 728. What is its market share?

✔ **13%**

14 A dealer's van sales rise from 300 to 345 while the regional market grows from 2,000 to 3,000. What happened to its market share?

✔ **Share fell from 15% to 11.5%: rivals won more new demand**
