TEACHER GUIDE DRAFT

Pearson BTEC Level 3 National Extended Certificate in Business (601/7159/5)

Financial ratios

Unit 3: Personal and Business Finance
F3 Profitability ratios; F4 Liquidity ratios; F5 Efficiency ratios

A revision lesson. Pupils run a car dealership in firms of four and revise financial ratios on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Current ratio

Round 1

Can they pay their bills?

Current ratio? Type the number before ":1".

Current assets	**£60,000**
Owed to suppliers	**£9,200**
Bank overdraft	**£5,800**

ANSWER

£4

£9,200 + £5,800 = £15,000;
£60,000 ÷ £15,000 = 4 : 1

Why: They hold £4 of assets for every £1 they owe soon.

2 Raise current ratio

Round 1

Your current ratio is 0.8.

Which two actions would raise it?

- **A** Swap the overdraft for a 5-year loan
- **B** Buy computers on the overdraft
- **C** Sell an unused building for cash
- **D** Use cash to buy a new ramp
- **E** Pay suppliers with cash

ANSWER

✓ Swap the overdraft for a 5-year loan
✓ Sell an unused building for cash

Why: Raise current assets or cut current liabilities, without the other moving.

3 Rank current ratio

Round 2

Three dealers: current assets and current liabilities.

Order by current ratio, lowest first?

- **A** £45,000 assets, £50,000 debts
- **B** £120,000 assets, £60,000 debts
- **C** £60,000 assets, £40,000 debts

ANSWER

1. **£45,000 assets, £50,000 debts**
2. **£60,000 assets, £40,000 debts**
3. **£120,000 assets, £60,000 debts**

Why: Ratios 0.9, 1.5 and 2.0.

Topic tasks

4 Profit margin

Round 2

Last year's accounts.

Profit margin, as a %?

Revenue	**£139,000**
Cost of sales	**£127,880**
Expenses	**£6,950**

ANSWER

3%

£139,000 − £127,880 − £6,950 = £4,170; ÷ £139,000 = 3%

Why: Profit for the year is what is left after cost of sales and expenses.

5 Low liquid ratio

Round 3

Your current ratio is 3.5, but your liquid capital ratio is 0.4.

What should you do, and why?

A Leave it as it is

B Cut the inventory you hold

ANSWER

✓ Cut the inventory you hold

Why: Most current assets are unsold inventory: cash is tied up in cars.

6 ROCE as a %

Round 3

Last year's accounts.

ROCE, as a %?

Profit for the year	**£10,920**
Total equity	**£109,200**
Non-current liabilities	**£27,300**

ANSWER

8%

£109,200 + £27,300 = £136,500; £10,920 ÷ £136,500 × 100 = 8%

Why: Every £1 of capital employed earned 8p of profit.

Final questions

Each pupil answers 6 final questions on financial ratios. They come from these 11 questions.

Then each pupil writes one short answer: “Analyse why a high current ratio is not always good.”

1 A service division has revenue of £800,000 and operating profit of £96,000. What is its operating profit margin?
✔ **12%**

2 A campaign produces £160,000 revenue and attributable gross profit of £56,000. What is its attributable gross profit margin?
✔ **35%**

3 A dealer earns £2,400,000 revenue and £144,000 profit for the year. What is net profit margin?
✔ **6%**

4 A dealer group has revenue of £2,400,000 and net profit of £168,000. What is its net profit margin?
✔ **7%**

5 A dealer has current assets of £180,000 and current liabilities of £225,000. What is its current ratio, and what does it show?
✔ **0.8 to 1: short-term debts exceed the assets to meet them**

6 A finance director says the dealer is “liquid enough to get through March”. What does liquidity measure?
✔ **Whether short-term debts can be met when due**

7 A dealer’s revenue is £900,000 and cost of sales £648,000. What is the gross profit margin?
✔ **28%**

8 A dealer group’s profit before interest and tax is £126,000 and its capital employed £1,050,000. What is return on capital employed?
✔ **12%**

9 A parts business has current assets of £300,000 and current liabilities of £240,000. What is its current ratio?
✔ **1.25:1**

10 A dealer’s current ratio falls from 1.6:1 to 0.9:1 over the year. What does this suggest?
✔ **It may struggle to pay short-term debts**

Final questions

11 A dealer’s revenue rises but its gross profit margin falls. Which is the most likely cause?

✔ **Cars were bought at higher prices than before**
