Pearson Edexcel Level 3 Advanced GCE in Business (9BS0)

Break-even

Theme 2: Managing business activities
2.2 Financial planning · 2.2.3 Break-even

A revision lesson. Pupils run a car dealership in firms of four and revise break-even on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Cars to break even

Round 1

They take up to 5 cars.

Cars to break even? Round up.

Livery, one-off	**£2,400**
Staff training, one-off	**£2,150**
Customer pays per car	**£18,760**
You pay per car	**£16,800**

ANSWER

£3

(£2,400 + £2,150) ÷ £1,960 = 2.32 → 3 cars

Why: Part of a car does not sell: 3 whole cars cover the costs.

2 Break-even limits

Round 1

You plan a fleet deal with a break-even chart.

Which two are limits of break-even analysis?

- **A** It leaves out the fixed costs
- **B** It cannot show the profit
- **C** It assumes one fixed price
- **D** It assumes every car is sold
- **E** It needs the firm's cash balance

ANSWER

✓ It assumes one fixed price
✓ It assumes every car is sold

Why: It assumes all output sells at one price; it does show fixed costs and profit.

3 Safety margin as %

Round 2

Three orders, each with its break-even point.

Order by margin of safety as a %, lowest first?

- **A** Order 8 cars, break-even 6
- **B** Order 20 cars, break-even 16
- **C** Order 10 cars, break-even 7

ANSWER

1. **Order 20 cars, break-even 16**
2. **Order 8 cars, break-even 6**
3. **Order 10 cars, break-even 7**

Why: (20 − 16) ÷ 20 = 20%, (8 − 6) ÷ 8 = 25%, (10 − 7) ÷ 10 = 30%.

Topic tasks

4 Profit on the deal

Round 2

A deal with a set-up cost.

Profit on the deal?

Livery and set-up, one-off	**£6,550**
Customer pays per car	**£12,475**
You pay per car	**£10,900**
They order	**9 cars**

ANSWER

£7,625

9 × (£12,475 − £10,900) − £6,550 = £7,625

Why: The first cars pay the set-up; the rest is profit: £7,625.

5 Which price to set

Round 3

You expect 7 sales at either price. At £9,500 a car you break even at 6; at £9,000, at 8.

Which price should you set, and why?

A £9,000 a car

B £9,500 a car

ANSWER

✔ £9,500 a car

Why: At 7 sales £9,500 clears its break-even of 6; £9,000 falls short of 8.

6 Margin after rise

Round 3

They order 8 cars.

Margin of safety now, in cars? Round break-even up.

Livery and set-up, one-off	**£7,900**
Customer pays per car	**£16,665**
Cost per car before the rise	**£13,150**
Cost rise	**10%**

ANSWER

£4

£13,150 + 10% = £14,465; £7,900 ÷ £2,200 → 4; 8 − 4 = 4

Why: The cost rise ate into the margin of safety: 4 cars left.

Final questions

Each pupil answers 6 final questions on break-even. They come from these 8 questions.

Then each pupil writes one short answer: “Analyse the risk of a low margin of safety.”

1 A component sells for £48. Variable cost is £30 a unit and fixed costs are £54,000 a month. What is monthly break-even output?

✔ **3,000 units**

2 A repair plan costs £36 a month, variable cost £12, fixed costs £72,000. Expected sales are 4,000 plans. What is the margin of safety?

✔ **1,000 plans**

3 A vehicle sells for £22,500 and its variable acquisition and preparation cost is £17,100. What is unit contribution before fixed costs?

✔ **£5,400**

4 Monthly fixed costs rise from £90,000 to £108,000 while contribution remains £300 per vehicle. By how many vehicles does break-even output increase?

✔ **60 vehicles**

5 Contribution is £2,400 a vehicle at today’s price; matching a rival cuts it to £1,500. Fixed costs are unchanged. Which effect follows?

✔ **Break-even rises: each sale covers less fixed cost**

6 A tyre service charges £120 per job, variable cost is £72 and monthly fixed costs are £38,400. What is break-even output?

✔ **800 jobs**

7 A service plan sells for £50 a month, has variable fulfilment cost of £18 and fixed monthly support cost of £96,000. What is break-even membership?

✔ **3,000 members**

8 Fixed costs are £84,000. Each vehicle sells for £16,000 and has a variable cost of £12,000. What is the break-even output?

✔ **21 vehicles**
