Financial ratios

5 Financial information and financial decisions
5.5 Analysis of accounts

A revision lesson. Pupils run a car dealership in firms of four and revise financial ratios on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Gross profit margin

Round 1

Last year's accounts.

Gross profit margin, as a %?

Cars sold	**12 cars**
Price per car	**£16,500**
Gross profit	**£45,540**

ANSWER

23%

12 × £16,500 = £198,000; £45,540 ÷ £198,000 × 100 = 23%

Why: It keeps 23p of every £1 of sales before overheads.

2 Why margin fell

Round 1

Gross profit margin stayed the same, but profit margin fell.

Which two could explain this?

- **A** Cars cost more to buy
- **B** Staff wages rose
- **C** More cars were sold
- **D** Rent rose
- **E** Prices were cut

ANSWER

- ✓ **Staff wages rose**
- ✓ **Rent rose**

Why: Only expenses come between gross profit and profit.

3 Rank gross margin

Round 2

Three dealers: sales and gross profit for the year.

Order by gross margin, highest first?

- **A** Sales £200,000, gross profit £50,000
- **B** Sales £80,000, gross profit £24,000
- **C** Sales £500,000, gross profit £100,000

ANSWER

1. **Sales £80,000, gross profit £24,000**
2. **Sales £200,000, gross profit £50,000**
3. **Sales £500,000, gross profit £100,000**

Why: Margins 30%, 25%, 20%: the biggest profit has the lowest margin.

Topic tasks

4 Gross margin change

Round 2

Two years compared.

Gross margin change, in % points?

Sales, last year	**£200,000**
Gross profit, last year	**£32,000**
Sales, this year	**£190,000**
Gross profit, this year	**£47,500**

ANSWER

9%

£47,500 ÷ £190,000 = 25%;
£32,000 ÷ £200,000 = 16%;
25 − 16 = 9 points

Why: The margin went from 16% to 25%.

5 Raise gross margin

Round 3

You want a higher gross profit margin.

Which change works, and why?

A Buy cars more cheaply

B Cut the showroom rent

ANSWER

✔ Buy cars more cheaply

Why: Rent is an overhead; gross margin is price less the cost of the cars.

6 New profit margin

Round 3

Overheads are going up.

New profit margin, as a %?

Sales	**£100,000**
Gross profit	**£9,000**
Overheads	**£5,000**
Overheads rise by	**20%**

ANSWER

3%

£5,000 + 20% = £6,000;
£9,000 − £6,000 = £3,000; ÷
£100,000 = 3%

Why: Work out the new overheads first, then the margin.

Final questions

Each pupil answers 6 final questions on financial ratios. They come from these 7 questions.

Then each pupil writes one short answer: “Explain one way a dealer could raise its profit margin.”

1. A dealership has gross profit of £60,000 and sales revenue of £150,000. What is its gross profit margin?
   ✔ **40%**

2. A workshop has £30,000 gross profit and a 30% gross profit margin. What is its sales revenue?
   ✔ **£100,000**

3. A promoted line’s gross profit stays £30,000 while sales revenue rises from £84,000 to £90,000. What is the new gross profit margin?
   ✔ **33.3% (approximately)**

4. Gross profit margin = gross profit ÷ revenue × 100. Revenue is £600,000 and gross profit £150,000. Using the formula, what is the gross profit margin?
   ✔ **25%**

5. A dealer’s sales revenue is £400,000 and its gross profit £100,000. What is the gross profit margin?
   ✔ **25%**

6. A workshop’s gross profit margin is 40% and its sales revenue £250,000. What is its gross profit?
   ✔ **£100,000**

7. A dealer’s gross profit margin rises from 18% to 22%. What does this show?
   ✔ **More of each £1 of sales is left after cost of sales**
