Revenue, costs and profit

5 Finance and accounting (AS Level)
5.4 Costs · 5.4.1 Cost information; 10.1.1 Statement of profit or loss

A revision lesson. Pupils run a car dealership in firms of four and revise revenue, costs and profit on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Variable unit cost

Round 1

Split the costs.

Variable cost per car?

Total costs, a month	**£52,350**
Fixed costs, a month	**£4,750**
Cars sold	**4 cars**

ANSWER

£11,900

(£52,350 − £4,750) ÷ 4 = £11,900

Why: Take the fixed costs off first. Then share the rest between the cars.

2 Why profit fell

Round 1

Revenue rose 10% this year, but profit fell.

Which two could explain this?

- **A** Variable costs rose faster than revenue
- **B** Overheads fell
- **C** Fixed costs jumped this year
- **D** Prices were raised
- **E** More cars sold at the same margin

ANSWER

✓ Variable costs rose faster than revenue
✓ Fixed costs jumped this year

Why: Profit falls when costs grow faster than revenue.

3 Statement in order

Round 2

You read your income statement from the top.

Put these in order, top first?

- **A** Gross profit
- **B** Operating profit
- **C** Revenue
- **D** Profit for the year

ANSWER

1. Revenue
2. Gross profit
3. Operating profit
4. Profit for the year

Why: Revenue less cost of sales, then overheads, then interest and tax.

Topic tasks

4 Profit after tax

Round 2

Year-end figures.

Profit after tax for the year?

Gross profit	**£73,000**
Overheads	**£40,500**
Interest paid	**£1,000**
Tax on the profit	**25%**

ANSWER

£23,625

£73,000 − £40,500 − £1,000 = £31,500; − 25% = £23,625

Why: Tax is taken from the profit after interest: £7,875.

5 Costs or revenue

Round 3

Revenue is £200,000 and costs £180,000. Raise prices so revenue rises 5%, or cut costs 5%?

Which raises profit more, and why?

A Cut costs by 5%

B Raise revenue by 5%

ANSWER

✔ **Raise revenue by 5%**

Why: 5% of £200,000 is £10,000; 5% of £180,000 is £9,000.

6 Profit next year

Round 3

Next year's plan.

Profit next year? Minus if below zero.

Revenue	**£105,000**
Revenue rises by	**20%**
Costs	**£66,000**
Costs rise by	**25%**

ANSWER

£43,500

£126,000 − £82,500 = £43,500

Why: Revenue and costs both change. Work out each new figure first.

Final questions

Each pupil answers 6 final questions on revenue, costs and profit. They come from these 8 questions.

1. A car supermarket records revenue of £1,260,000 and cost of sales of £945,000. What is its gross profit?
   ✔ **£315,000**

2. A workshop pays £14,000 a month in rent and salaries plus £38 of parts per service. With 250 services, what are total costs?
   ✔ **£23,500**

3. A workshop has fixed costs of £18,000 a month and variable costs of £60 per service. With 300 services, what are total costs?
   ✔ **£36,000**

4. A dealer's month: revenue £84,000, fixed costs £25,000, variable costs £41,000. What is the profit?
   ✔ **£18,000**

5. A dealer sells 40 cars at £9,500 each. Each car cost £8,200 and fixed costs are £30,000. What is the month's profit?
   ✔ **£22,000**

6. Which cost of a dealership is a variable cost?
   ✔ **Fuel to prepare each car sold**

7. A repair chain's total costs are £240,000 for 400 services. What is the average (unit) cost of a service?
   ✔ **£600**

8. A dealer's revenue is £1,000,000, cost of sales £820,000 and other expenses £110,000. What is gross profit?
   ✔ **£180,000**
