TEACHER GUIDE DRAFT

Junior Cycle Business Studies (NCCA)

Marketing mix: price

Strand 2: Enterprise
2.8 The marketing mix: price

A revision lesson. Pupils run a car dealership in firms of four and revise marketing mix: price on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Margin of the price

Round 1

What do you keep?

Margin, as % of the price?

You pay per car	**€10,200**
Customer pays per car	**€12,000**

ANSWER

15%

(€12,000 − €10,200) ÷ €12,000 = 15%

Why: You keep 15p of every €1 the customer pays.

2 Penetration risks

Round 1

You set a low price on a new model to win buyers fast.

Which two are the main risks?

- **A** Rivals can never match it
- **B** Fewer buyers at the start
- **C** A higher profit per car
- **D** Buyers may leave when the price rises
- **E** A low margin on each car

ANSWER

✓ Buyers may leave when the price rises
✓ A low margin on each car

Why: A low price earns little per car, and buyers drawn by price may not stay.

3 Rank by margin

Round 2

Three cars: what you pay for each, and its price.

Order by margin %, highest first?

- **A** Pay €14,000, price €17,500
- **B** Pay €7,000, price €10,000
- **C** Pay €9,000, price €12,000

ANSWER

1. Pay €7,000, price €10,000
2. Pay €9,000, price €12,000
3. Pay €14,000, price €17,500

Why: Margins 30%, 25%, 20%: the biggest profit in euros has the lowest margin.

Topic tasks

4 Price to hit margin

Round 2

Price to hit your target.

Price with the 25% margin?

You pay per car	**€7,200**
Prep per car	**€300**
Target margin on the price	**25%**

ANSWER

€10,000

(€7,200 + €300) ÷ 75% = €10,000

Why: A 25% margin is a 33% mark-up on cost.

5 High or low launch

Round 3

You get a rare new model that no rival in town sells.

Which launch price should you set, and why?

A A low price at launch

B A high price at launch

ANSWER

✔ A high price at launch

Why: No rival and a rare model: buyers will pay more at first, so skim.

6 Discounted profit

Round 3

They want a discount.

Profit on the 3 cars?

List price per car	**€17,000**
Fleet discount	**10%**
You pay per car	**€12,000**

ANSWER

€9,900

3 × (€17,000 − 10% − €12,000) = €9,900

Why: The 10% discount costs €5,100 of profit on the deal.

Final questions

Each pupil answers 6 final questions. Pick the question topic “Pricing”: the 6 come from these 10 questions.

1. A car cost your firm €9,000. You want €2,200 left after the VAT on the margin. Roughly what price do you need?
   ✔ **About €11,706**

2. A rival sells the same model for €11,500. Your car cost €10,200. If you match the rival's price, what is left after VAT?
   ✔ **€1,057**

3. Your price to a customer is €13,000. What does the customer actually hand over?
   ✔ **€13,000: the VAT on your margin is inside the price**

4. You sell a car to another student firm for €9,500; it cost you €8,800. Does the sale carry VAT?
   ✔ **Yes: 23/123 of the €700 margin, like any sale**

5. You add a 20% markup to a car that cost €8,000. What is the price, and what is the margin?
   ✔ **Price €9,600, margin €1,600**

6. A customer offers €10,000 and another firm offers €9,600 for a car that cost €8,500. After VAT, how much more does the customer sale leave?
   ✔ **€326**

7. A fleet customer wants 4 cars that cost you €7,000 each and offers €30,000 for the lot. What is the margin per car, and the VAT on the lot?
   ✔ **€500 a car; VAT €372**

8. Two firms sell the same SUV. Firm A paid €14,000 and asks €16,000; Firm B paid €15,200 and asks €16,000. Which firm keeps more after VAT?
   ✔ **Firm A: a bigger margin leaves more even after a bigger VAT**

9. You cut a price from €12,000 to €11,400 on a car that cost €9,900. How much less do you keep after VAT?
   ✔ **€487**

10. Your firm wants €6,000 left after VAT this round and sells cars at a €2,000 margin each. How many must it sell?
    ✔ **4**
