TEACHER GUIDE

Pearson Edexcel GCSE (9-1) in Business (1BS0)

Cash and cash flow

Theme 1: Investigating small business
Topic 1.3 Putting a business idea into practice · 1.3.3 The importance of cash to a business

A revision lesson. Pupils run a car dealership in firms of four and revise cash and cash flow on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Profit on this deal

Round 1

They pay you in 30 days.

Profit on this deal?

Cars in the deal	**2 cars**
You buy them today, in total	**£28,000**
Prep and delivery, per car	**£300**
Customer pays in total	**£34,000**

ANSWER

£5,400

£34,000 − £28,000 − 2 × £300 = £5,400

Why: £5,400 profit, but £28,600 is out of your cash for 30 days.

2 Improve cash flow

Round 1

Your bank balance is low. Customers take 60 days to pay you.

Which two would improve your cash flow?

- **A** Ask suppliers for longer to pay
- **B** Pay suppliers early for goodwill
- **C** Buy more cars now to sell later
- **D** Give customers 90 days to pay
- **E** Ask customers to pay sooner

ANSWER

✓ Ask suppliers for longer to pay
✓ Ask customers to pay sooner

Why: Cash comes in sooner or goes out later; the other three take cash out sooner.

3 Forecast in order

Round 2

You fill in one month of your cash-flow forecast.

In what order do you work it out?

- **A** Work out net cash flow: in minus out
- **B** Carry it forward to open next month
- **C** Write in the closing balance
- **D** Add net cash flow to the opening balance

ANSWER

1. **Work out net cash flow: in minus out**
2. **Add net cash flow to the opening balance**
3. **Write in the closing balance**
4. **Carry it forward to open next month**

Why: Net cash flow first; add the opening balance; the closing balance carries over.

Topic tasks

4 Month-end balance

Round 2

A two-month deal.

Balance at the end of month 1?

Set aside for this deal	**£25,000**
Month 1: you buy the cars	**£49,500**
Month 1: customer deposit	**£11,500**
Month 2: rest of the price	**£45,500**

ANSWER

−£13,000

£25,000 − £49,500 + £11,500 = −£13,000

Why: Month 1 is short by £13,000. Month 2 brings £45,500.

5 Cash now or later

Round 3

Your bank balance is low. A taxi firm pays £30,000 today; a hire firm pays £31,000 in 90 days.

Which deal should you take, and why?

A The taxi firm: £30,000 today

B The hire firm: £31,000 in 90 days

ANSWER

✓ The taxi firm: £30,000 today

Why: With cash short, money today matters more than £1,000 more in 90 days.

6 Month-end balance

Round 3

Paid in months 2 and 3.

Balance at the end of month 2? Minus if below zero.

Set aside for this deal	**£15,000**
Month 1: you buy the cars	**£42,000**
Running costs, each month	**£400**
Price, paid in halves	**£53,000**

ANSWER

−£1,300

£15,000 − £42,000 − 2 × £400 + £26,500 = −£1,300

Why: Month 2 is still short: the other half comes in month 3.

Final questions

Each pupil answers 6 final questions on cash and cash flow. They come from these 12 questions.

1 A dealership starts a week with £15,000 cash. Cash inflows are £42,000 and cash outflows are £38,000. What is the closing cash balance?
✔ **£19,000**

2 A motor business forecasts cash inflows of £31,000 and cash outflows of £37,000 in April. What is net cash flow for April?
✔ **−£6,000**

3 A dealership opens April with £22,000 cash and forecasts net cash flow of −£6,000. What is its forecast closing balance?
✔ **£16,000**

4 A dealer records a sale on credit but will not receive cash for 30 days. Why can it be profitable yet short of cash?
✔ **Profit counts sales; cash depends on when money arrives**

5 A firm begins a week with £8,000 cash, receives £25,000 and pays £39,000. What is its closing cash balance?
✔ **−£6,000**

6 Customers pay 60 days after delivery, so a profitable fleet dealer is short of cash. Which change helps its cash flow most directly?
✔ **Agree shorter payment terms**

7 Why should the Finance lead update a cash-flow forecast when customer payment dates change?
✔ **Receipt timing changes when a surplus or shortage may occur**

8 Why should the Finance lead not use profit alone to decide whether a bill can be paid today?
✔ **Profit does not show when cash arrives**

9 Which sign should most concern the Finance lead about short-term solvency?
✔ **It often cannot pay bills when due**

10 Profit is sales minus costs. Cash is the money in the bank now. A profitable dealer cannot pay a bill due Friday. What helps soonest?
✔ **Chase customers who owe it money**

Final questions

11 Net cash flow = cash in − cash out. In: £64,000 sales, £19,000 servicing. Out: £71,000 stock, £26,000 wages. Step one: cash in = £83,000. What is net cash flow?

✔ **£14,000 negative**

12 A dealer's yearly revenue exceeds total costs, but this month it cannot pay its parts supplier on time. Which problem is this?

✔ **A cash-flow problem: money goes out before it comes in**
