TEACHER GUIDE

Pearson Edexcel GCSE (9-1) in Business (1BS0)

# Revenues, costs and profits

Theme 1: Investigating small business
**1.3.2 revenue, costs and profit; Theme 2 · Topic 2.4 Making financial decisions · 2.4.1**

A revision lesson. Pupils run a car dealership in firms of four and revise revenues, costs and profits on their own deals. Seat each firm together. Each firm answers the topic tasks together.

## The lesson

**45-minute setting**

| Setup | Round 1 | Round 2 | Round 3 | Final questions |
|---|---|---|---|---|

### EVERY ROUND

**Firm decisions**

# What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

## CEO

**Staff · Sabotage** from Round 2

## Finance

**Capital & Loans · Investments**

## Sales & Marketing

**Marketing**

## Operations

**Seasonal stock**

# Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

## 1 Total monthly costs

Round 1

A month at the yard.

**Total costs for the month?**

| | |
|---|---|
| Fixed costs, a month | **£8,000** |
| You pay per car | **£17,500** |
| Cars sold | **4 cars** |

**ANSWER**

**£78,000**

£8,000 + 4 × £17,500 = £78,000

**Why:** Fixed costs stay the same. Variable costs grow with every car.

## 2 Fixed or variable

Round 1

You list your dealership's costs for a month.

**Which two are fixed costs?**

- **A** Valeting each car sold
- **B** Rent on the showroom
- **C** Cars bought to sell
- **D** Commission on each sale
- **E** The manager's salary

**ANSWER**

**✓ Rent on the showroom**
**✓ The manager's salary**

**Why:** Rent and salaries stay the same however many cars you sell.

## 3 Rank by profit

Round 2

Three months: cars sold, the price, and total costs.

**Order by profit, highest first?**

- **A** 6 at £15,000, costs £75,000
- **B** 20 at £5,000, costs £90,000
- **C** 10 at £9,000, costs £70,000

**ANSWER**

**1. 10 at £9,000, costs £70,000**
**2. 6 at £15,000, costs £75,000**
**3. 20 at £5,000, costs £90,000**

**Why:** Profit: £20,000, £15,000, £10,000. The most revenue made the least profit.

# Topic tasks

## 4 Average unit cost

Round 2

Cost of each car sold.

**Average cost per car?**

| | |
|---|---|
| Fixed costs, a month | **£2,500** |
| Variable cost per car | **£9,500** |
| Cars sold | **5 cars** |

**ANSWER**

**£10,000**

£2,500 ÷ 5 + £9,500 = £10,000

**Why:** Each car carries £500 of the fixed costs.

## 5 More sales or cuts

Round 3

Each car sold adds £400 profit. Sell 5 more a month, or cut fixed costs by £1,500 a month?

**Which raises profit more, and why?**

**A** Cut fixed costs by £1,500

**B** Sell 5 more cars

**ANSWER**

✔ **Sell 5 more cars**

**Why:** 5 × £400 = £2,000, more than the £1,500 saved.

## 6 Profit after rise

Round 3

Costs are going up.

**Profit after the rise? Minus if below zero.**

| | |
|---|---|
| Sales | **£100,000** |
| Variable costs | **£45,000** |
| Fixed costs | **£15,000** |
| Variable costs rise by | **10%** |

**ANSWER**

**£35,500**

£100,000 − £45,000 − 10% (£4,500) − £15,000 = £35,500

**Why:** The rise adds £4,500 to variable costs.

# Final questions

Each pupil answers 6 final questions on revenues, costs and profits. They come from these 11 questions.

1. A dealership earns revenue of £86,000 and has total costs of £68,500 in a trading period. What is its profit?
   ✔ **£17,500**

2. A vehicle retailer has sales revenue of £150,000 and cost of sales of £90,000. What is its gross profit?
   ✔ **£60,000**

3. A showroom has fixed costs of £11,500 and variable costs of £37,500 for a month. What are total costs?
   ✔ **£49,000**

4. A showroom expects £72,000 sales revenue and wants to make £23,000 profit in a month. What is the highest total cost consistent with that target?
   ✔ **£49,000**

5. A used-car retailer earns £95,000 sales revenue and £33,000 gross profit. What was its cost of sales?
   ✔ **£62,000**

6. A dealer initially expects £70,000 revenue and £66,000 total costs. It then refunds £5,000 of sales while costs stay unchanged. What is the revised result?
   ✔ **A £1,000 loss**

7. A campaign leads to the sale of six vehicles at £14,500 each. What is sales revenue?
   ✔ **£87,000**

8. Revenue is £84,000 and cost of sales £54,000. A supplier discount cuts cost of sales by 10%; revenue is unchanged. What is the new gross profit?
   ✔ **£35,400**

9. Operations has a total cost budget of £56,000, including £9,500 of fixed handling costs. How much can be spent on variable purchasing costs?
   ✔ **£46,500**

10. Revenue = selling price × quantity sold. A dealer sells 14 vans at £21,000 each. Using the formula, what is its van revenue?
    ✔ **£294,000**

# Final questions

**11** Gross profit = revenue − cost of sales; net profit = gross profit − other costs. Gross profit here: £480,000 − £336,000 = £144,000. Other costs are £96,000. Net profit?

✔ **£48,000**
