Sources of finance

Unit 3: Business Strategies for Success
3.3 Financial strategies for success · 3.3.1 Sources of finance

A revision lesson. Pupils run a car dealership in firms of four and revise sources of finance on their own deals. Seat each firm together. Each firm answers the topic tasks together.

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same. Your Live screen shows each task and every firm's answer.

1 Total to pay back

Round 1

Same interest every year.

Total to pay back?

Loan	**£50,000**
Interest, each year	**3%**
Repaid over	**4 years**

ANSWER

£56,000

£50,000 + 4 × £1,500 = £56,000

Why: The loan costs £6,000 in interest.

2 Short-term sources

Round 1

You need £8,000 for three weeks to cover a gap.

Which two sources fit best?

A Trade credit from a supplier
B Selling shares
C A bank overdraft
D A mortgage
E A five-year bank loan

ANSWER

✓ Trade credit from a supplier
✓ A bank overdraft

Why: Short-term needs suit short-term finance.

3 Rank total interest

Round 2

Three ways to borrow £10,000, simple interest.

Order by total interest, cheapest first?

A Overdraft: 15% a year, 6 months
B Card: 24% a year for 3 months
C Loan: 8% a year for 2 years

ANSWER

1. **Card: 24% a year for 3 months**
2. **Overdraft: 15% a year, 6 months**
3. **Loan: 8% a year for 2 years**

Why: Interest: £600, £750, £1,600.

Topic tasks

4 Loan or overdraft

Round 2

Loan or overdraft?

Overdraft cost minus loan cost?

Money needed	**£20,000**
Loan interest, for the year	**4%**
Overdraft charge, a month	**£200**
You need it for	**7 months**

ANSWER

£600

7 × £200 − £800 = £600

Why: The overdraft costs £600 more here.

5 Loan or own profit

Round 3

You want a £30,000 workshop ramp. You have £40,000 of profit kept in the firm, not needed elsewhere.

How should you pay, and why?

A Use the profit kept in the firm

B Take a loan at 9%

ANSWER

✔ Use the profit kept in the firm

Why: Retained profit costs no interest and need not be repaid.

6 Cheaper loan cost

Round 3

Borrow £25,000.

Interest plus fee on the cheaper loan?

Bank interest, each year	**7%**
Bank fee, one-off	**£400**
Credit firm, interest a year	**9%**
Repaid over	**4 years**

ANSWER

£7,400

Bank £7,400; credit firm £9,000; cheaper £7,400

Why: The bank is cheaper, even with the fee counted.

Final questions

Each pupil answers 6 final questions on sources of finance. They come from these 8 questions.

1. A normally healthy dealer has a short, forecast cash gap before customers pay. Which source may be most suitable?
   ✔ **An overdraft with a limit covering the temporary gap**

2. A dealership wants to finance a workshop extension expected to last many years. Why might a long-term loan be suitable?
   ✔ **Repayments can be spread over the asset's life**

3. A profitable private company uses accumulated profit to buy diagnostic equipment. What source of finance is this?
   ✔ **Retained profit**

4. A dealer uses last year's profit to buy a new ramp. Which source of finance is this?
   ✔ **Retained profit**

5. A dealer needs £5,000 for two weeks until customers pay. Which source of finance fits best?
   ✔ **A bank overdraft**

6. A parts supplier lets a dealer pay 30 days after delivery. Which source of finance is this?
   ✔ **Trade credit**

7. Why might a dealer prefer a bank loan to an overdraft for a £40,000 workshop extension?
   ✔ **Repayments are fixed and spread over years**

8. A private limited company dealer sells more shares to raise £100,000. What is a drawback?
   ✔ **The owners give up some control**
