TEACHER GUIDE

Pearson Edexcel GCSE (9-1) in Business (1BS0)

Business calculations: ARR

Theme 2: Building a business
Topic 2.4 Making financial decisions · 2.4.1 average rate of return

A revision lesson. Pupils run a car dealership in firms of four and revise business calculations: ARR on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same.

1 Lifetime profit

Round 1

A new valeting bay.

Total profit over its life?

Cost to set up	**£45,000**
Returns, each year	**£14,500**
It lasts	**5 years**

ANSWER

£27,500

5 × £14,500 − £45,000 = £27,500

Why: It earns back its cost and £27,500 more.

2 What ARR misses

Round 1

You compare two investments by ARR.

Which two things does ARR not show?

- **A** The cost of the investment
- **B** Profit as a % of the cost
- **C** When the money comes back
- **D** The risk that returns fall short
- **E** The average profit a year

ANSWER

✓ When the money comes back
✓ The risk that returns fall short

Why: ARR averages the profit; it says nothing of timing or risk.

3 ARR steps in order

Round 2

You work out the ARR of a new ramp.

In what order do you work it out?

- **A** Divide by the years
- **B** Divide by the cost, × 100
- **C** Take off the cost: total profit
- **D** Add up all the returns

ANSWER

1. Add up all the returns
2. Take off the cost: total profit
3. Divide by the years
4. Divide by the cost, × 100

Why: Total profit, then profit a year, then as a % of the cost.

Topic tasks

4 Valeting bay ARR

Round 2

A new valeting bay.

Average rate of return (ARR), as a %?

Cost to set up	**£60,000**
Profit over its life	**£84,000**
It lasts	**5 years**

ANSWER

28%

£84,000 ÷ 5 = £16,800; ÷ £60,000 × 100 = 28%

Why: It earns 28p a year for every £1 put in.

5 ARR below loan rate

Round 3

A ramp would have an ARR of 6%. You would borrow the money at 8% a year.

Should you invest, and why?

A No

B Yes

ANSWER

✔ **No**

Why: A 6% return does not cover an 8% cost of borrowing.

6 Better option ARR

Round 3

Which one pays better?

ARR of the better option, as a %?

Option A: cost	**£75,000**
Option A: profit each year	**£9,000**
Option B: cost	**£55,000**
Option B: profit each year	**£13,750**

ANSWER

25%

A 12%; B 25%; better 25%

Why: Compare the rates, not the pounds of profit.

Final questions

Each pupil answers 6 final questions on business calculations: ARR. They come from these 10 questions.

1. A workshop upgrade costs £60,000 and is forecast to make total profit of £15,000 over three years. What is its average rate of return?
   ✔ **8.3%**

2. A project is forecast to make £3,000, £5,000 and £4,000 profit over three years. What maximum investment gives a 20% average rate of return?
   ✔ **£20,000**

3. Upgrade A: cost £50,000, £12,000 profit over three years. Upgrade B: cost £40,000, £10,800 over three years. Which has the higher average rate of return, and by how much?
   ✔ **Upgrade B, by 1 percentage point**

4. Two investments have similar average rate of return. What additional factor should the Finance lead consider?
   ✔ **Risk and when the cash comes back**

5. A new MOT bay costs £40,000 and should make £24,000 total profit over four years. What is the average rate of return?
   ✔ **15%**

6. A paint booth costs £80,000 and is expected to make £10,000 profit every year. What is its average rate of return?
   ✔ **12.5%**

7. Project A costs £30,000 and makes £9,000 total profit over three years. Project B costs £50,000 and makes £12,500 over five years. Which has the higher average rate of return?
   ✔ **Project A, at 10%**

8. What does the average rate of return tell a dealer about an investment?
   ✔ **Average yearly profit as a percentage of the cost**

9. A dealer spends £40,000 on a car wash. Over 4 years it makes a total profit of £24,000, after taking off the cost. What is the ARR?
   ✔ **15%**

10. A dealer can buy a car wash with an ARR of 12% or a new ramp with an ARR of 8%. On ARR alone, which should it choose?
    ✔ **The car wash, as it has the higher ARR**
