TEACHER GUIDE

Pearson Edexcel Level 3 Advanced GCE in Business (9BS0)

Productivity and capacity use

Theme 2: Managing business activities
2.4 Resource management · 2.4.1 Production, productivity and efficiency; 2.4.2 Capacity utilisation

A revision lesson. Pupils run a car dealership in firms of four and revise productivity and capacity use on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same.

1 Capacity used %

Round 1

Workshop capacity.

Capacity used, as a %?

Prep bays	**3 bays**
Most one bay can do a week	**10 cars**
Cars prepared a week	**24 cars**

ANSWER

80%

3 × 10 = 30; 24 ÷ 30 × 100 = 80%

Why: It has 6 cars of spare capacity a week.

2 Full capacity risks

Round 1

You run at 100% capacity all year.

Which two problems are most likely?

- **A** No spare time for repairs
- **B** Staff stress and more errors
- **C** A higher fixed cost per car
- **D** Spare capacity is wasted
- **E** Staff with too little to do

ANSWER

✓ No spare time for repairs
✓ Staff stress and more errors

Why: Full capacity spreads fixed costs well, but leaves no slack.

3 Fixed cost per car

Round 2

Three workshops: fixed costs a year, and cars prepared.

Order by fixed cost per car, lowest first?

- **A** £30,000 fixed, 300 cars
- **B** £45,000 fixed, 500 cars
- **C** £20,000 fixed, 160 cars

ANSWER

1. £45,000 fixed, 500 cars
2. £30,000 fixed, 300 cars
3. £20,000 fixed, 160 cars

Why: £90, £100, £125 a car: the biggest costs, spread widest, are cheapest.

Topic tasks

4 New productivity

Round 2

More staff, more cars.

New cars prepared per member of staff?

Cars prepared a week	**18 cars**
Staff	**3 staff**
Extra staff	**3 staff**
Extra cars prepared a week	**30 cars**

ANSWER

8 cars

(18 + 30) ÷ (3 + 3) = 8 cars

Why: Productivity rose from 6 to 8 cars per worker.

5 Meet a short peak

Round 3

Demand is above your capacity for two months only.

How should you meet it, and why?

A Subcontract the extra work

B Build a new workshop

ANSWER

✔ Subcontract the extra work

Why: A short peak does not pay for new capacity.

6 Unit cost when full

Round 3

Run the workshop full.

Fall in unit cost at full capacity?

Fixed costs, a month	**£12,810**
Variable cost per car	**£400**
Cars prepared a month	**15 cars**
Most it can prepare a month	**35 cars**

ANSWER

£488

£12,810 ÷ 15 = £854; ÷ 35 = £366; £854 − £366 = £488

Why: The variable cost stays; only the fixed cost per car falls.

Final questions

Each pupil answers 6 final questions on productivity and capacity use. They come from these 10 questions.

1. A service centre can complete 640 jobs a month but completes 512. What is its capacity utilisation?
   ✔ **80%**

2. A parts team produces 1,440 tested units in 240 labour hours. What is labour productivity?
   ✔ **6 units per labour hour**

3. A dealer considers outsourcing parts deliveries. Which comparison best supports an operational decision?
   ✔ **Total cost, reliability, lead-time risk and capability kept or lost**

4. A bodyshop's practical monthly capacity is 900 repair-hours and booked work uses 765 hours. What is spare capacity as a percentage of practical capacity?
   ✔ **15%**

5. A workshop raises utilisation from 82% to 98%, while waiting time and rework rise sharply. What is the best interpretation?
   ✔ **It is near its limit, so delays rise**

6. Technician productivity differs widely between branches. Which study is most likely to support a fair operational decision?
   ✔ **Compare job mix and hours first**

7. Before a wellbeing redesign a workshop produced 450 standard hours with 90 paid hours; after, 520 with 104. What happened to measured labour productivity?
   ✔ **It remained 5 standard hours per paid hour**

8. A fitting centre's 27 fitters fit 918 tow bars a month. What is labour productivity?
   ✔ **34 tow bars per fitter**

9. A bodyshop can do 250 repairs a month and did 160. What is its capacity utilisation, and the effect on unit costs?
   ✔ **64%: each repair carries more fixed cost than at full capacity**

10. A workshop can service 400 vehicles a month and serviced 300 last month: 75%. Which measure is that?
    ✔ **Its capacity utilisation**
