TEACHER GUIDE

WJEC GCSE Business (C00/4967/2)

Stock

Unit 1: Introduction to the Business World
1.6 The supply chain · 1.6.1 stock control

A revision lesson. Pupils run a car dealership in firms of four and revise stock on their own deals. Seat each firm together. Each firm answers the topic tasks together.

What pupils do

Every pupil buys and sells cars. In Firm decisions, each role has its own job.

CEO

Staff · Sabotage from Round 2

Finance

Capital & Loans · Investments

Sales & Marketing

Marketing

Operations

Seasonal stock

Topic tasks

Each firm gets its own figures. The method is the same.

1 Reorder level

Round 1

Never run out for them.

Reorder level, in cars?

They buy each week	**2 cars**
Supplier delivers in	**2 weeks**
Buffer stock	**5 cars**

ANSWER

£9

2 × 2 + 5 = 9 cars

Why: The buffer of 5 covers a late delivery or a busy week.

2 Too much stock

Round 1

Your yard holds far more cars than you sell in a month.

Which two problems are most likely?

A Running out of cars to sell
B Higher storage costs
C Lower insurance costs
D Cash tied up in stock
E Lost sales from empty space

ANSWER

✓ **Higher storage costs**
✓ **Cash tied up in stock**

Why: Extra stock holds cash and costs money to keep.

3 Reorder in order

Round 2

You use a reorder level and buffer stock.

Put these in order, first to last?

A New cars arrive
B The lead time passes
C Stock falls to the reorder level
D You place an order

ANSWER

1. **Stock falls to the reorder level**
2. **You place an order**
3. **The lead time passes**
4. **New cars arrive**

Why: The order goes in at the reorder level and arrives after the lead time.

Topic tasks

4 Cars to order now

Round 2

Fill the yard on delivery.

Cars to order now, to fill the yard on delivery?

In stock now	**13 cars**
They buy each week	**5 cars**
Supplier delivers in	**2 weeks**
Your yard holds at most	**15 cars**

ANSWER

12 cars

13 − 5 × 2 = 3 left; 15 − 3 = 12 cars

Why: 3 are left when the order lands, so order 12.

5 JIT or hold stock

Round 3

Your supplier is two hours away and always on time. Hold 40 cars, or hold 10 and reorder often?

Which should you choose, and why?

A Hold 40 cars

B Hold 10 and reorder often

ANSWER

✓ Hold 10 and reorder often

Why: A reliable, nearby supplier lets you hold less and free up cash.

6 Weeks until reorder

Round 3

When do you order next?

Weeks until you reorder?

They buy each week	**3 cars**
Supplier delivers in	**3 weeks**
Buffer stock	**2 cars**
In stock	**14 cars**

ANSWER

£1

Reorder level 3 × 3 + 2 = 11; (14 − 11) ÷ 3 = 1

Why: Reorder in 1 weeks, when 11 cars are left.

Final questions

Each pupil answers 6 final questions on stock. They come from these 7 questions.

1. What is one risk of relying on a single overseas parts supplier?
   ✔ **A problem abroad could stop its supply**

2. Which evidence set is most useful when selecting a supplier for regularly needed vehicle parts?
   ✔ **Price, quality, reliability and delivery performance**

3. Supplier A is slightly cheaper, but frequently delivers parts late. Supplier B is reliable. Which factor supports choosing B for urgent repairs?
   ✔ **Dependability of delivery**

4. Delivery fuel costs rise sharply. Which operational response is most likely to reduce the impact?
   ✔ **Plan shorter routes with fuller vans**

5. A key supplier enters insolvency. Which information is most important first?
   ✔ **Open orders, stock cover and backup suppliers**

6. A supply chain is every business that helps get a product to the customer. A tyre maker’s factory floods. Using this, what happens to a workshop?
   ✔ **Its tyre deliveries may stop, though it did nothing wrong**

7. A reliable supplier delivers the right parts, in full, when promised. The cheapest supplier delivers late one time in three. What does staying with it really cost?
   ✔ **Delayed jobs and waiting customers can cost more than the saving**
