FOR YOUR IT TEAM

IT one-sheet: network requirements.

Everything needed to run the simulation on a school network.

1 · DOMAINS TO WHITELIST

Allow these domains through the school's web filter and firewall. All traffic is HTTPS.

thebusiness.school	Website & teacher resources
play.thebusiness.school	The simulation itself, students & teachers
***.thebusiness.school**	Simplest rule if wildcards are supported

fonts.googleapis.com · fonts.gstatic.com

Web fonts, loaded by the simulation's stylesheet

2 · CONNECTIONS & BANDWIDTH

HTTPS, port 443 only

Standard secure web traffic. No custom ports, no VPN, nothing to install.

Live updates

Live gameplay uses ordinary HTTPS requests to the same domains, about once a second per device during play. There are no WebSocket connections. If the game stalls behind a proxy, check that play.thebusiness.school is allowed.

Light bandwidth

Text and small data updates, no video streaming. A full class of 40 runs comfortably on ordinary school Wi-Fi.

Data stored in the EU

Session data is held server-side in an EU database in Frankfurt. No peer-to-peer connections between student devices.

3 · DEVICES

Students need a laptop, desktop or Chromebook: Windows, Mac or ChromeOS. Phones and tablets, including iPads, cannot join the live lesson. No installation, no browser extensions, no admin rights. Recent versions of Chrome, Edge, Safari and Firefox are all supported.

4 · ACCOUNTS & DATA

A student joins with a 6-digit PIN and a nickname they choose. We process that nickname, the decisions they make in the game and the answers they write. In the connected version of Founder's Hour a student is identified by their first name and last initial instead of a nickname. Only the teacher has a login. The answers a student writes are sent to a language model so that it can mark them and the teacher gets a report, and they are not used to train the model. Student data and game states are deleted after 30 days. The school is the data controller and TBS Education Ltd Oy is the data processor. TBS Education Ltd Oy is ICO registered, registration ZC133810, verifiable at ico.org.uk.

Full details on the **data protection** and **trust & safety** pages.

5 · SUB-PROCESSORS

Three sub-processors are involved in running a session. Your students' devices only ever connect to the domains listed in section 1; the rest is server to server.

Netlify	Hosting and functions, US and global network
Neon	Database, EU, Frankfurt
OpenAI	Marks the answers students write

Schools are told at least 30 days before a sub-processor is added or replaced, and may object.

Something blocked on your network?

Tell us what your filter reports and we'll help you get running, usually it's just a domain missing from the allow list.
